The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Patent: WO 0222675-A 577 21-MAR-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       may contain polymorphisms when compared to sequences from Col-O. Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the 5' sequences, selection of clones, and sequence assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the C-terminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or Lacr ecotypes and therefore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 1287)

```
which are involved in the lignin biosynthetic pathway. The polynucleotides can be used for modulating lignin content, lignin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lignin biosynthetic pathway, and for producing a plant having altered lignin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PCR amplification. The lignin content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAA6149 represent polynucleotide and protein sequences used in the exemplification of the present invention.

Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and

Claim 1; Page 133; 213pp; English

The present invention describes isolated polynucleotides and proteins encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase (CCR), phenylalanine ammonia-lyase (PAL), 4-commarate:COA ligase (4CCC), coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBC) laccase, peroxidase, ferulate-5-hydroxylase (F5H), alpha-amylase, proteins (CBG)

The polynucleotides can be used for modulating lighin content, lighin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lighin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PCR amplification. The lighin content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAB16449 represent polynucleotide and protein sequences used in the exemplification of the present invention.
                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                 (GENE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 512

The CC polynucleotides can be used for modulating lignin content, lignin CC composition and the structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any CC organism and for PCR amplification. The lignin content can be efficiently CC modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to CC AAB16449 represent polynucleotides and protein sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Вb

The gene is useful for the development of a plant highly resistant against active oxygen which is formed under various environmental stress conditions. This sequence represents a peroxidar related DNA fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAT66687 standard; cDNA; 1167
                      cDNA clones (AAT66684-87) respectively code for soybean peroxidases SEPal, SEPa2, SEPb1 and SEPb2 (AAM16607-10). Plant peroxidase specific primer SEP (AAM66679) was generated from the conserved distal haem ligand (AAM16603) in all plant peroxidases, and was used to generate a peroxidase gene probe. Primary hybridisation screening using the probe yielded 25 clones. Il Positive clones were recovered after 2 rounds of PCR using PSP and a T7 vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Glycine max
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25-JUL-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                No.:

The peroxidases are useful in pulp and paper bleaching, on-site waste destruction, soil remediation, organic synthesis and diagnostic chemistries. Soybean peroxidase has advantages over chlorine bleach, being cheaper, more environmentally friendly, and producing hydroxyl lons with twice the oxidising power of chlorine ions. The plant enzyme is cheap and easy to produce. The invention also relates to immunoassays or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA encodes a soybean peroxidase SEPb2 polypeptide. The invention provides four cDNA sequences (AAV69273 to AAV69276) encoding soybean peroxidases SEPa1, SEPa2, SEPb1 and SEPb2 (AAW81493 to AAW81496) respectively. An expression vector containing the SEPa1 cDNA sequence can be used to transform host cells for the recombinant production of the peroxidase. The peroxidase is useful in industries and diagnostic

```

This invention relates to a peroxidase derived from a Paraquat callus. Included in the invention are the gene encoding the per a vector containing the gene, and a method for the preparation peroxidase. The gene is useful for the development of a plant by resistant against active oxygen which is formed under various environmental stress conditions. The present sequence represent

from a Paraquat resistant encoding the peroxidase, the preparation of the

a plant highly

peroxidase gene of the invention.

Included in the invention are the gene encoding the peroxidase, a vector containing the gene, and a method for the preparation of the peroxidase. The gene is useful for the development of a plant highly resistant against active oxygen which is formed under various environmental stress conditions. This sequence represents a PER4 peroxidase related cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1191

CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate-COA ligase (ACL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC laccase, peroxidase, ferulate-5-hydroxylase (F5H), alpha-amylase, CC caffeic acid methyl transferase, Caffeoyl CoA methyl transferase, CC coumerate CoA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol CC glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, CC which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any CC organism and for PCR amplification. The lignin content can be efficiently CC modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to CC AAB16449 represent polynucleotide and protein sequences used in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (CMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plant; lignin; lignin biosynthetic pathway; Eucalyptus Pinus radiata; Monterey pine; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eucalyptus grandis peroxidase nucleotide sequence SEQ

Sequence 8092, Application US/09878574

Patent No. US20020110548A1

GENERAL INCOMMATION

APPLICANT: Byrum, Joseph R.

APPLICANT: Byrum, Joseph R.

APPLICANT: Thompson, Michael D.

FILE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with

FILE OF INVENTION: Plants

FILE REFERENCE: 38-21(15401)8

CURRENT APPLICATION UNMBER: US/09/878,574

CURRENT APPLICATION NUMBER: 09/333,535

PRIOR APPLICATION NUMBER: 09/333,535

PRIOR PILING DATE: 1999-06-14

NUMBER OF SEQ ID NOS: 15775

SEQ ID NO 8092

LENGTH: 285

TYPE: DNA

ORGANISM: Glycine max

OTHER INFORMATION: Clone ID: 701100739H1

peroxidase (EC 1.11.1.7) - flax (fragment)
C:Species: Linum usitatissimum (flax)
C:Date: 21-May-1999 #sequence_revision 21-May-1999 #text_C
C:Accession: 708121
R:Omann, F: 7950n, H.
submitted to the EMBL Data Library, February 1998
A;Description: cDNA sequence of a basic peroxidase (FLXPER
A;Reference number: Z16366
A;Accession: 708121
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-305 < COMA>
A;Cross-references: EMBL:AF049881; NID:g2944416; PIDN:AACO
A;Experimental source: cv. Stormont Cirrus
C:Genetics:
A;Gene: PER4
C:Superfamily: peroxidase
C:Keywords: chromoprotein; heme; iron; metalloprotein; oxi
F:34.181/Binding site: heme iron (His) (axial ligands) #st
F:56-61/Disulfide bonds: #status predicted
F:50/Active site: Arg #status predicted
F:303/CD/Sulfide bonds: #status predicted
F:303/CD/Sulfide bonds: #status predicted
F:303/CD/Sulfide bonds: #status predicted

```
"Amino-acid sequences of heme-linked, histidine-containing peptides of five peroxidases from horseradish and turnip.";

Eur. J. Blochem. 73:353-358(1977).

-i- CATALYTIC ACTIVITY: Donor + H(2)O(2) = oxidized donor + 2 H(2)O(2).

-i- COPACTOR: Binds 1 protoheme IX and 1 iron(III) ion.

-i- MISCELLANEOUS: THE PROTEIN SHOWN, TPJ. IS THE PRINCIPAL ISOPEROXIDASE DURING WINTER IN TURNIP.

-i- SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P00434;

-1- FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANTS, BIOSYNTHESIS AND DEGRADATION OF LICHIN, DEFENSE RESPONSE TOWARD WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

-1- CATALYTIC ACTIVITY: Donor + H(2)0(2) = oxidized donor + 2 H(2)0.

-1- COFACTOR: Binds 1 protoheme IX, 1 iron(III) ion and 2 calcium io
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Buffard D., Breda C., van Huystee R.B., Asemota Dang Ha D.B., Esnault R.; Dang Ha D.B., Esnault R.; Molecular cloning of complementary DNAs encodin peroxidases from cultivated peanut cells."; Proc.
